SMALL ROLL **many** APPLICATIONS

Versatile Shutter System

NOVATION

Custom Applications

Residential Shutters

Commercial Shutters

Garage Doors (Europe Only)

Strong and Compact

Traditional roll shutters require large 10"-12" (250 mm - 300 mm) housings, ruining the style and look of your home. Now, with the Compact shutter system, an 84" (2.1 m) tall opening will require only a compact 6" (150 mm) housing. That is 40-50% smaller, creating a much more appealing installation.

Sustainable

The World's First Sustainable Residential Roller Shutter

- Qcompact curtain is 100% Recyclable
- Qcompact shutter is 99% Recyclable
- Qcompact has No Foam Filling
- Qcompact is 99% Aluminum
- Qcompact is 60% Recycled
- Qcompact has No Waste

40-50% Smaller Shutter Box

QOMPACT
VS.
TRADITIONAL

QOMPACT
IS 40-50%
SMALLER THAN
TRADITIONAL

(Europe Only)

- Built in wall applications can have 30-40% more shutter box foam insulation
- Qcompact slat hinges are strong enough to have curtains up to 6 m wide (20') and 5 m high (15')
- Qcompact rolls are 40-50% smaller with hinges 27-times stronger* than foam-filled (*see pull apart test)

Note: Widths >12' may require a larger box size.

Smooth and Quiet

The Qcompact® shutter system is available in manual and automatic operation. Using the patented nested design, the Qcompact shutter system rolls smoothly and quietly. 6/6 nylon bushings allow the shutter to glide smoothly through the security guides.

184" (4800 mm)	8" (205 mm)	14" (350 mm)

WORLD'S smallest SHUTTER BOX

Strong

Qcompact combines premium design with unparalleled strength. The single-walled, extruded slats withstand sledge hammer impacts and hurricane impact tests.

In head-to-head tests, Qcompact outperformed its foam-filled competitors every single time.

In impact testing, Qcompact withstood 82 punches, 5 kicks, and 80 hits with a sledge hammer. The foam-filled shutter was destroyed in seconds.

End Retention

End retention screws (shown below) keep the curtain captive in the rails. Qcompact curtains can't be pried out with crowbars or pushed out of the rails due to high winds.

Note: Qcompact can also be made without end retention where smaller siderails are sufficient.

Qcompact's end retention prohibits the curtain from being pushed out of the rails. Without end retention, the 40mm foam-filled curtain was easily compromised.

Hinge Strength

The improved slat design is 27-times stronger than a perforated 40mm slip hinge, making a Qcompact shutter impenetrable by comparison.

*Pull-Apart Strength Test with 152mm (6in.) Sample. Qcompact Pull Apart at 8050 kg/m
40mm Pull Apart at 296 kg/m*

Hurricane Tested

Qcompact shutters meet the strict standards for U.S. Florida (FBC) hurricane approvals. In fact, Qcompact passed with 330 km/h (200 mph) winds up to 6000mm (19.5 ft) wide.

Elegant Design and Engineered Excellence

What makes the Qcompact shutter system unique is the 10 different slat sizes that have been ingeniously engineered to allow the slats to nest tightly with each other. The nesting allows for virtually zero space between the slats, creating a compact roll and the smallest box housing required. Each slat grouping has a specific radius designed to accommodate the ever increasing roll diameter. This proprietary design means that each slat rolls together - perfectly.

Residential Shutters

Home owners will love the quiet operation, elegant design, and security of Qcompact.

In addition to privacy and sun shading, Qcompact uniquely provides security and hurricane protection.

Commercial Shutters

Qcompact can be built both wider and taller than foam-filled shutters, making it the perfect choice for commercial applications.

These shutters are widely used in the United States for their loss prevention and design benefits. Commercial shutters can be perforated for night time merchandising.

Nesting Innovation

The Qcompact Innovation is based on **10** slats that gradually get taller

THE CHOICE *is* CLEAR

Transparoll Security Shutters

StoreSafe®

VISION

Transparent Rolling Shutters

There are two clear choices

StoreSafe®

Transparoll Security Shutters

Premium. Elegant. Protection.

Transparoll shutters are the premier security and partition shutters in the StoreSafe family. Transparoll is essentially a "glass" wall that allows for maximum visibility, protection, and elegance. The clear polycarbonate is 250 times stronger than glass of the same thickness. Transparoll shutters roll up when not in use. Transparoll shutters offer security without altering the aesthetic of the shopping environment. Perfect as a security partition or wall, Transparoll can be used for inside or outside applications. StoreSafe Transparoll shutters are the ultimate in vision security.

- The ultimate in security
- Highest visibility
- Reduce energy costs
- Prevent break-ins
- Protect against extreme weather
- Scratch resistant

LX-6 Security Shutters

Elegant Design. Strong. Protection.

Also fabricated with clear polycarbonate pieces, the LX6 rolling shutter is a lighter weight and medium-duty shutter with excellent visibility.

The LX6 is similar to the Transparoll, but with three foot wide sections of polycarbonate joined with a vertical spacer to make up the full shutter width. The lighter weight of the LX6 allows for the push-up/pull-down manual operation on shutters up to 100 sq ft.

Shown below, the side rails and box housings match the existing storefront (QMI bronze 06).

STRONG

SMOOTH

*ELEGANT
DESIGN*

Transparent Rolling Shutters

There are two clear choices

StoreSafe®

Transparoll Security Shutters

Transparoll security shutters prevent theft while providing maximum visibility. Transparoll shutters are covered in a scratch resistant coating, which allows for graffiti to be removed easily. In addition, Transparoll is UV-resistant, preventing discoloration and ensuring the shutter maintains its clarity. The Transparoll shutter is made of 6mm thick polycarbonate, which has a smooth surface, leaving potential intruders with no grip. Transparoll is available in widths up to 18ft. in one piece. Transparoll shutters are installed using solid guides that virtually cannot be broken.

Emergency Release Devices (ERD) and battery backup operation are available.

LX-6 Security Shutters

- Anodized "silver" aluminum horizontal ribs
- QMI standard 7 colors available for box housing, side rails, and bottom slat
- Most sizes available with tubular motor operation - keeping box housing size smaller
- Excellent visibility
- Polycarbonate inserts up to 36" (914mm) wide

For both interior and exterior use, the LX6 rolling shutter provides a physical security barrier without compromising the aesthetic. Useful at restaurant patios for patron comfort, or to keep burglars from even attempting a break-in, the QMI LX6 clear shutter system provides convenient protection.

The LX6 shown above offers clear views of the merchandise, but warns would-be-intruders this store is well protected.

Vision Shutter Comparison Chart

QMI StoreSafe Vision Model	Cost factor	Max size spring assist push up/pull down	Max size tube motor w/ std housing	External jack shaft motor required (no housing available)	3x3 or 4x4 steel post required

Solid

Security

Commercial applications are typically installed on the interior side of the glazing. Intruders want in and out fast. QMI shutters take burglars WAY too much time.

Vision

Perforated slats keep your signage and displays working for you - "Security with Vision."

"A cell phone store near Atlanta suffered 28 break-ins during a 2-year period. Since getting QMI StoreSafe shutters they have not incurred a single break-in attempt - going on 3 years now."

~ Retail Loss Prevention ~

Electronic Stores

Specialty Stores

Department Stores

Q-Clear

The clean, attractive lines of the Q-Clear sliding grille make it the most popular style of storefront closure in malls. Clear, wide inserts give an unobstructed view of displayed merchandise and store interior design, while providing a protective barrier against theft and intrusion.

QMI's smooth-rolling grilles run on 1-1/8" (28.6 mm) diameter twin rollers in a tough overhead track that

is our exclusive design. Q-Clear grille curtains and lock posts are suspended with 5/16" (7.9 mm) diameter cold rolled steel hanger rods that reduce deformation over the lifetime of the grille.

Polycarbonate 1/8" (3.2 mm) inserts provide shatterproof, clear glazed, secure grilles that virtually eliminate smash and grab theft.

Additional Styles

Q-Guard

This tough open style grille provides a high level of security while keeping the sense of open space. Its robust construction is based on the system of individual panels interlocked by full height hinge members. Hinge rods are completely concealed to protect them from vandalism and damage. The panels fold cleanly and positively, resulting in a smooth and easy to operate grille.

Q-Air

Q-Air is a popular sliding grille: tough enough to be an effective security barrier while providing a clear view of architecture and merchandise. Q-Air is perforated with a custom pattern of slots that are narrow to prevent penetration and long to provide excellent vision and air flow.

Q-Classic

The most economical and light weight open style sliding grille, it easily blends with any décor, providing unobtrusive protection. Its fine, graceful lines and high visibility make the Q-Classic an effective barrier, while maintaining a sense of open space.

Stainless Steel Screens

StoreSafe[®]

SECURITY

Commercial Screens

StoreSafe[®]

Security & Vision

Protect against glass breakage. Woven stainless steel mesh fixed into a strong perimeter mounting frame covers most storefront and window glazing from attack. Keep intruders out without feeling caged in.

"Screens with Vision."

- Churches / Museums
- Dormitories / Schools / Student Housing
- Municipal Buildings
- Laboratories
- Secure offices

View

QMI security screens enable views toward the greatest degree of light. Customers can see outside during the day and retailers can merchandise safely all night long—just leave the lights on. Screens will repel most rocks, bricks, knives, crowbars, and sling shots.

Maintain architectural design and aesthetic curves. The subtle stainless steel screen frame is fabricated to integrate with the building design while providing maximum security with minimum visual impact.

Security & Vision

Security without sacrificing architectural building design. The low profile screen frame fits building contours and has the appearance of a bug screen.

Before - Unprotected

After - Protected

Safety without Design Compromise

Municipal complexes protected from vandalism without any modifications to the structure or building aesthetics.

Protection

Woven high-tensile 304 grade stainless steel wire secures occupants and provides clear exterior vision.

Solid Rolling Shutter System

CounterSafe®

TECTION

Pharmacy

CounterSafe® security shutters may be solid slat, or more commonly, with the perforated Punch 51 slat to enable airflow between the pharmacy and the store without any sacrifice in security.

Side Folding Grilles may have curved top tracks for open pharmacy configurations and the curtain stack is often hidden in a side pocket.

QMI rolling shutters may be up to 30 feet (9.1 m) wide and up to 15 feet (4.6 m) tall to protect most straight line applications.

QMI's LX6 rolling shutter utilizes clear polycarbonate inserts which are 250x stronger than glass, yet provides maximum visibility.

Kiosk & Counters

CounterSafe rolling shutters are perfect for protecting valuable merchandise that is kept behind a counter. Perfect for preventing theft, CounterSafe shutters are used in pharmacies, press boxes, stadiums, concession stands, food counters, and much more.

Rolling counter shutters provide a security barrier that is quick to deploy and easy-to-use. QMI counter shutters can be installed on the interior of the application to give it a sleek look.

The counter shutter can be securely locked with a slide bolt or keylock, which deploys a locking bolt sideways into the mortised side rails, keeping the counter clear. Push-up/pull-down operation is easy to deploy, enabling employees to secure an area in just a few seconds.

Deters intruders and
reduces glass breakage

ENERGY EFFICIENCY

Reduces heat load and
enables secure ventilation

No Ordinary Bug Screen

Stop burglars in their tracks. Stop flying storm debris from breaking your windows. The nearly impenetrable stainless steel screen protection by QMI provides year-round safety, yet allows airflow and light into your home just like a bug screen.

Hurricane and Security Protection

- Permanent storm and security protection. Your home is protected 24/7/365 while never appearing boarded up.

Never a rush to deploy storm protection. Leave your home knowing it's secure no matter what happens while you are gone.

Custom Built to Most Any Shape

Florida Building Code (FBC) approved.
Miami-Dade (HVHZ) approved.

Security Without Compromising Design

- **Knife Sheer Test**
Simulated razor knife attack on mesh
- **Large Missile Hurricane Test**
30mph 2x4 shot against mesh protecting window
- **Dynamic Impact Test**
100lb. bag swung against mesh
- **Jimmy Test**
Strength test simulating attempted crow bar forced-entry

Additional Benefits

- Security
- Bug/Lizard/Alligator/Screen
- Ventilation
- Exterior Views
- Energy Savings
- Peace of Mind

Hurricane and Security Screens with Vision

- Meets the large missile impact test for Category 5 hurricanes-the most stringent residential test available
- Reduces glass breakage from flying debris
- Replaces your everyday bug and lizard screens

- Escape window screens available-provides both protection and ease of exit
- Shields windows from hurricane force winds and flying debris
- The screen's surface tension stops damaging winds, but still allows light breezes and ventilation like an ordinary bug screen

- Repels storms and protects from intruders 24/7/365

- A simple panic bar along one side provides easy emergency egress; however, burglars and flying debris are kept safely outside. Hinged screens should be used on bedrooms and basement windows for safety.

- Shades the sun up to 22% without compromising exterior views
- Reduces UV rays up to 60%, saving carpets and furniture from fading

No Visual Compromises

- Vision through the hurricane screens is nearly the same as an ordinary bug screen.
- Remove the old, window bug screen. The new hurricane-security screen frame mounts on the trim over and around the existing window, fastening into the building's structure.
- The screen material is always black, enabling your vision to go toward the greatest degree of light without compromise-giving you excellent daytime visual acuity. Lighter colored screens like gray or aluminum bounce light back into a person's eye and reduce the visual clarity.

No Architectural Compromises

- Low-profile shaped or rectangular fixed screen frames are just 2-7/16" (61.9 mm) wide x 1-1/8" (28.6 mm) deep.
- Mounting is typically placed over existing trim or brick molding, thus the new StormSafe screen blends with the architecture.
- Egress screens have a continuous hinge on one side and the panic bar on the other. Egress frames are still only 3-3/4" (95.3 mm) wide x 2-13/16" (71.4 mm) deep. For aesthetic consistency, where an egress frame occurs, it is recommended to have all egress screens on that same elevation.

PROTECTION **with** VISION

Security Storage

ProductSafe® security cases are designed to protect valuable merchandise from theft. Steel cases with roll down protection are easy to use and easy to secure. When open, the security door is completely out of sight.

ProductSafe cases are ideal for protecting:

- cell phones • cigarettes • cameras • video games • DVDs • jewelry • designer glasses • pharmaceuticals • electronics • medical records

ProductSafe cases are customized for each retailer to ensure they are convenient and easy to use. Cigarette cases are fitted with spring slides. Pharmacies often use combinations of fixed upper baskets and pull out lower shelves/baskets to conveniently sort through customer prescriptions.

Electronics retailers often incorporate peg hooks in the upper portion of the cases for smaller items, and fixed or pull out shelves on the bottom for larger boxed inventory. Uniweb/slat wall or steel peg board backs and adjustable shelves are available.

- Reduce “smash and grabs”
- Out of sight during business hours
- Custom designed to your specifications
- Simple push-up/pull-down operation

HomeSafe®

Security Shutters & Screens

Rolling Shutters

In addition to home security screens, rolling shutters are available to provide protection from severe weather and sun damage. Aesthetically pleasing and subtle, HomeSafe® rollup shutters are invisible from the inside when installed on the exterior of a home. Hurricane-approved, HomeSafe shutters are available in several attractive options. QMI rolling shutters are designed to fit the smallest box housing in the industry, which allows for a more subtle look and smaller space. HomeSafe also offers curved, beveled, or square housings to blend into your home's architecture. Battery operated systems are also available.

Security Screens

HomeSafe security screens provide high-quality home security and storm protection. Perfect for windows and patios, HomeSafe screens are beautifully designed and quality assured. QMI security screens are only slightly darker than a regular bug screen, but provide superior protection. Screens are quality tested to ensure they discourage burglars and deflect flying debris.

- Hurricane-approved
- Prevents break-ins
- Screens and shutters available
- Reduces sun damage
- Control options available
- Reduces outside noise
- Helps prevent water damage
- Smallest box housing available
- Protects against extreme temperatures

SECURITY **and** PROTECTION

Shutter Controls & Options

Torsion Spring Assist Control Systems

QMI shutters have a non-slip hinge, which allows for the use of a torsion spring inside the tube opposite the control mechanism.

The spring assist has many advantages to standard shutter controls.

Manual Strap

A manual pull strap can be used on larger shutter sizes since the weight of the shutter is neutralized. The spring provides a counterbalance resulting in the shutter locking in the down position.

Manual Gear / Crank

The spring assist neutralizes the weight and enables gear operation for larger shutters and requires less effort to rotate the hand crank.

- up to 65 sq ft (6.5 sq meters)

Manual Push-up / Pull-down

Where most shutters require motors, the QMI spring-operated shutter allows for push up/pull down operation. This saves on both shutter and electrical costs. Large spring-operated shutters are useful for entry doors, as egress (life safety) issues are not a concern. Simple base-slat locks enable security, but allow for escape during fire or power failures. Spring operation is available up to 130 sq ft (13 sq meters) without motors or gears.

Solar Powered Operation

Enjoy energy savings from a roller shutter that does not add to your energy cost. Because of its spring-loaded tube, QMI shutters require less power for operation. This makes it possible to operate with a solar-powered battery.

Motorized with Line Voltage (120v) (220v)

The torsion spring allows for smaller motors and extends motor life. It also acts as a safety feature that prohibits a failed motor to allow a shutter curtain to free-fall.

- up to 170 sq ft (16,2 sq meters) w/tube motors
- up to 300 sq ft (30 sq meters) w/external motors

Hz/RTS Remote Control

- Available in single and multi-channel applications
- No need to aim the control at the motorized window covering, the radio signal travels through walls similar to a garage door opener
- Provides the ability to control motorized window coverings individually and/or by group with one control
- Offers a range of 65 ft (22 m) for easy operation

EZ Drive Low Voltage Motor (14.4v)

- One smart drive controller operates multiple shutters
- Rechargeable battery power - no worries about power failure
- Solar use possible
- up to 65 sq ft (6.5 sq meters)
